(we will do the first steps together in lab)

Log into the the computer lab computers in the linux operating system by pressing F12 as they start up.

Work through sections 1-3 of:

https://swcarpentry.github.io/shell-novice/ (Links to an external site.)Links to an external site.

After you have worked through those exercises,

Using the command line,

create a directory called BIO144

change to that directory,

and download a text file using:

wget https://raw.githubusercontent.com/McTavishLab/BIO144/master/intro.txt (Links to an external site.)Links to an external site.

Edit that text file using nano, to add in your name after Hello and save it.

rename that file to yourlastname.txt

Upload the final file here after you have completed the other parts of the lab.
